

Pilot Checklist

For your own safety, we urgently recommend to check the following points before the start:

- Check that the propeller screws are securely tightened and are of good quality.
- Check the correct installation of the spinner.
- Check the propeller for any possible defects.
- Ensure that the throttle setting at the transmitter is set to idle.
- Check all installed rechargeable batteries.
- Check the servo functions.
- Make sure that the ignition is switched off.
- Check all deflections for potential rudder play.
- Check the radar for damage and unobstructed movement.
- Check that the wing mount is securely fastened.
- Check that the canopy is securely fastened.
- Ask helpers to secure your aircraft during the start.
